

Technical brochure

Thermostatic Valve Type BVTS

Features

- Needs no power supply self acting
- Opens on rising sensor temperature
- Can be mounted on cold water inlet or hot water outlet of the boiler
- Can be mounted in any position
- Brass and other wetted materials suitable for drinking water
- Integrated sensor and valve body to eliminate risk of setting change
- Double sensor to ensure fail-safe operation
- Capillary tube protected against kinking by steel sheath
- Space saving compact design

Technical brochure

Approvals

CE marked according to PED 97/23/EC, category IV, safety equipment, EN 14597 (DIN 3440)

Materials

Valve body	forged brass	
Spring	stainless steel	
Sensor	copper	
Capillary tube	copper	
Sensor pocket	brass	
O-rings and gaskets	EPDM, NBR	
Activating button	ABS	
Other metal parts	forged brass	

Technical data

Media	Water		
Maximum Working Pressure	10 bar		
Ambient temperature	0 to 80°C		
Max. temperature of the sensor	ax. temperature of the sensor 125°C		
Media temperature	edia temperature 5 to 110°C		
Opening temperature	95°C ± 2°C (fixed)		
Hysteresis	esis 6°C		
Flow capacity	2.6 m3/h at min. 1 bar flow pressure		
Connection size	G ¾ pipe thread ISO 228		
Length of capillary tube	1.3 m or 4 m		

Ordering

Connection ISO228	Opening temperature [°C]	kv value (m³/h at Δp = 1 bar and sensor temp. 110 °C)	Capillary tube length [m]	Code no.
G ¾	95 ± 2 (fixed)	2.6	1.3	003N3300
G 34	95 ± 2 (fixed)	2.6	4.0	003N3301

*) Other Opening temperatures available on request.

Accessory

Description	Connection ISO228	Sensor pocket length [mm]	Code no.
BVTS sensor pocket spare part	G 1⁄2	140	003N3370

Thermostatic Valve, Type BVTS

Design and function

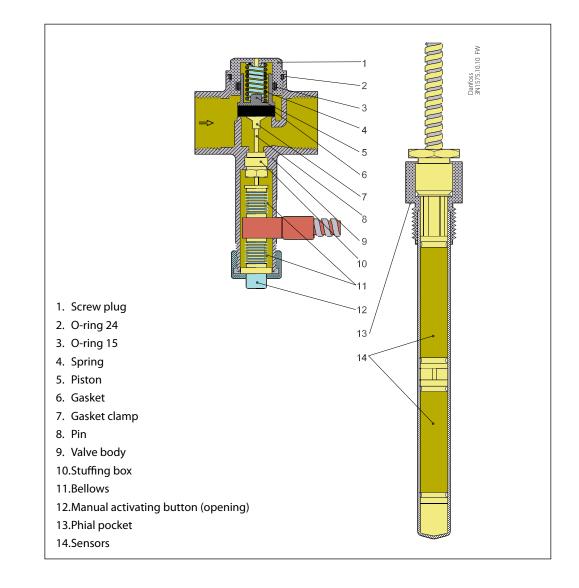

The Thermostatic Valve type BVTS is actuated by temperature increase. The valve consists of two integrated elements:

- spring loaded valve
- hermetically sealed thermostatic element with bellows, sensor and charge inside

The valve is adjusted to open at sensor temperature of $95^{\circ}C \pm 2^{\circ}C$. This setting is fixed and cannot be changed

by user.

When the temperature around sensor increases the charge inside the sensor heats up building up the pressure. This pressure is transferred to the valve via the capillary tube and bellows. At sensor temperature of $95^{\circ}C \pm 2^{\circ}C$ the pressure in bellows becomes greater than the spring load so the pin lifts up and the valve opens.

Fail-Safe function

Fail-safe function is ensured by two separate and independent sensing elements. Each of them has its own sensor and bellows. If one of the sensing elements fails the other is still able to open the valve.

Manual button

The BVTS valve is fitted with activating button which enables to manually open the flow on the valve.

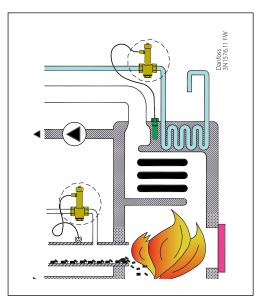

Technical brochure

Thermostatic Valve, Type BVTS

Applications

Dimensions

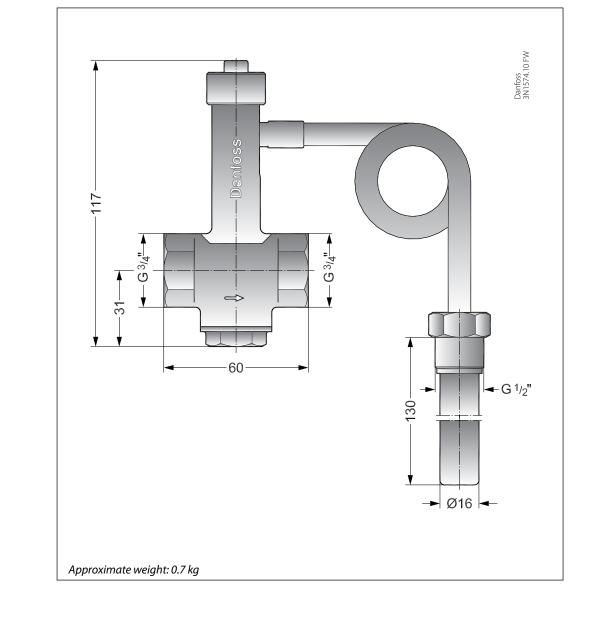

Overheating protection:

If the water temperature rises, the valve will open and let cold water through the heat exchanger system; thus quickly and efficiently lowering the temperature.

Back-burning protection:

If the temperature in the fuel feed system rises above $95^{\circ}C \pm 2^{\circ}C$, the valve will dispense a sufficient amount of water to extinguish fire.
